

MTI – Medical Tourism Italy

A PARTNER FOR THE MANAGEMENT AND OPTIMIZATION OF HEALTHCARE

- *Italian Territorial Healthcare in general and in the North East in particular is recognized as **THE BEST IN THE WORLD**. We do not only intend the single hospital, but the whole geographical network of healthcare understood as assistance to the population. We offer ourselves as TUTORs, alongside the local government. Our partners are the University Hospitals and Polyclinics.*
- **We have University training, e-learning, classrooms, also in affiliated nations, as well as consulting services for Second and Third Opinion at:**
 - the **University Tor Vergata** in Rome
 - the **Universities** of Verona and Venice
 - the **University** of Perugia

MTI today is the first and currently the only organization that acts as a point of contact between the world outside of the European Union and the **Italian Public Health System**. We are the result of decades of experience in the construction of health centers of worldwide excellence, billions of Euros invested in scientific research, development and the purchase of equipment of the latest generation.

MTI offers itself as **PARTNER in emerging countries outside the EU** concerning:

- The provision of medical treatment of **high specialization and of the highest excellence**, offered depending on the disease as individual performances, hospitalizations or several different medical services ("care packages").
- Integrated courses of **advanced training** (residential or remote) in favor of professionals such as doctors and health workers of the aforementioned countries.
- Services of **"second opinion"** and **"tele consulting"** in favor of professionals such as doctors, health professionals and HEALTH INSTITUTIONS domiciled in the aforementioned countries.
- Consulting for the technical design of construction, renovation and optimal maintenance of **MANAGEMENT OF NEW HOSPITALS** or of some hospital structures domiciled in the aforementioned countries.

For these reasons, we believe that a country with the need to develop HEALTHCARE has the extreme convenience of relying on an **INTERNATIONAL TUTOR** with specific experience. In the case of MTI experience is provided by the **UNIVERSITY HOSPITAL OF VERONA** with which we are affiliated. With over seven thousand employees and an annual turnover of about € 2 billion, thanks to our agreement we are able to offer the highest specialization in diseases such as dozens of types of cancer, transplants, rare diseases, their rehabilitation therapies and the postoperative follow-up, just to name a few.

As for the advanced training courses, we are able to organize courses of six months, in e-learning regarding the **Da Vinci Robot, Cyber Knife, Mazor Robotics with minimally invasive laparoscopic surgery** of the latest generation with teams of nurses and surgeons which are perfectly integrated between each other. These are professionals with a reputation for being the best in the world, with the highest technologies, in addition to an impeccable international reputation of our hospitals.

MTI, being the **DEALER of TERRITORIAL HEALTHCARE TUTORING**, under the local political directives will be the agent in charge of :

FINDING ALL THAT IS NECESSARY FOR THE ORGANIZATION OF HEALTHCARE in direct collaboration with the existing Healthcare apparatus, but with the political delegation for:

“ACTIVATION AND MANAGEMENT OF ALL THE TENDERS FOR THE SUPPLY OF WORKS AND SERVICES (title of the GRANT)” which consists in:

1- SITUATION ANALYSIS :

- Analysis of the population's necessities
- Finding of the necessary funds for the functioning of one or more hospitals
- Sheets for of Rating cost - benefit Convenience

2 – MANAGEMENT OF TENDERS FOR:

- General Design Executive
- Construction;
- Biomedical equipment, furniture and all the ancillary services
- Hospital ICT - software and hardware - computer networks - transmission and data storage - fleet management ICT
- Medicines - pharmacy
- Logistics
- Hospital Management
- Global Service
- Facility Management
- Hospitality
- Additional Services

Planning and building Hospitals means passing from the empty shell of a building, to the purchase and organization of all that is needed to make the hospital efficient from a medical point of view first of all, but remembering with extreme importance the **economic** point of view (costs).
